(Received Sep. 15, 1998; Revised Dec. 3, 1998; Accepted Dec. 4, 1998)

ABSTRACT

Reaction of 4-carboxy-3-cyano-pyrid-2-one 1a with SOCl₂ afforded the corresponding acid chloride 2. Treatment of 2 with different alcohols formed ester 3a,b. Condensation of 3a with hydrazine hydrate yielded the pyridazinone derivative 4. Reaction of N-acetyl pyridone 1b with thiosemicarbazide and hydroxylamine hydrochloride gave thiosemicarbazone 5 and oxime 7 derivatives. Condensation of 4-carboxy-3-cyano-pyrid-2-thione 1c with ethyl chloroacetate and thiourea gave ester derivative 8 and pyrido [2,3-d] pyrimidine derivative 10. Quinazolone derivative 11 was prepared by reaction of 1d with anthranilic acid. The reaction of 11 with several reagents was reported. The structure of the new compounds were established by analytical and spectroscopic measurements. Some new compounds showed interesting antimicrobial activities in vitro.

INTRODUCTION

In a previous paper¹ we have described an easy method for the synthesis of some 4-carboxy-3-cyano pyrididine derivatives to be evaluated as antimicrobial agents. In continuation of our previous work, the pyridine derivatives proved to be useful precursor for the synthesis of new fused heterocycles.

RESULTS

Reaction of 4-carboxy-3-cyano-6-biphenylpyrid-2-one 1a with SOCl$_2$ afforded the corresponding acid chloride 2. Compound 2 could not be isolated however its formation was proved by reaction with various alcohols resulting in the formation of ester, 3a,3b. When 3a reacted with hydrazine hydrate, it yielded the pyridazinone derivative 4 (Scheme 2). The analytical and spectral data of 2 and 3 were in accordance with the proposed structures.

Scheme 2

![Chemical structure](image)

$\text{Ar} = \text{C}_9\text{H}_5$

Treatment of N-acetyl-4-carboxy-3-cyano-6-biphenylpyrid-2-one 1b with thiosemicarbazide in refluxing AcOH yielded thiosemicarbazone 5. This latter compound was cyclized with ethylchloroacetate in refluxing ethanol in the presence of AcONa, and the 4-oxothiazole derivative 6 was obtained. Moreover, reaction 1b with hydroxylamine hydrochloride to gave the corresponding oxime 7 (Scheme 3).

4-carboxy-3-cyano pyridin-2-thione 1c was condensed with ethyl chloroacetate in dimethyl formamide in the presence of potassium carbonate gave the corresponding ethylmercaptopo derivative 8 (Scheme 4).

\end{align*} \]

\[ \text{Ar} = \text{C}_\text{H}_{12} \]

Cyclization\(^6\) of 8 with CH\(_3\)ONa afforded the corresponding thieno [2,3-b] pyridine derivative 9. On the other hand, treatment of (1c with thiourea afforded the corresponding pyrido [2,3-d] pyrimidine derivative 10. The quinazolone derivatives 11 were prepared by the reaction of anthranilic
acid\textsuperscript{7,8} with N-phenylthiocarbamoyl-4-carboxy-3-cyano-6-biphenylpyrid-2-one \textbf{1d}. Treatment of \textbf{11} with hydrazine hydrate\textsuperscript{9} gave hydrazino derivatives \textbf{12}. Compound \textbf{12} reacted with phenylisothiocyanate to afford 4-[N\textsuperscript{2}-phenylthiocarbamoyl] hydrazino] quinoline derivatives \textbf{13} (Scheme 5).

**Biological activity**

Some of the synthesized compounds were evaluated for their antimicrobial activities (minimum inhibition concentration MIC) against Gram positive bacteria (\textit{staphylococcus aureus} ATCC-65 38-p and \textit{Bacillus cereus} NRRL-B-569) and Gram negative bacterial (\textit{serratia marcesens} IMRU-70 and \textit{proteus merabitis NTC-289}) using the nutrient agar pour plate method\textsuperscript{10} at the 125 ug/ml and 175 ug/ml levels against the microorganisms used. The antifungal activity of same compounds were tested against \textit{Aspergillus fumgytus} (pp.29) to determine the MIC using
turbidmetric method.\textsuperscript{11} Ofloxacin was used as a drug reference. The results are listed in Table 2. Results indicated that compound 6 posses highest activity at low concentration level [125 μg/ml] against all microorganisms used to compared to the drug ofloxacin. Compound 9 also has the same activity against staphylococcus \textit{aureus} at the same concentration Compounds 3,5,6 and 9 posses highest activity against \textit{Bacillus cereus} at concentration level (175 μg/ml) compared to ofloxacin in. Compounds 6 and 9 show highest anti fungal activity at 175 μg/ml concentration.

\textbf{EXPERIMENTAL}

All mp.'s are uncorrected. IR spectra (cm\textsuperscript{-1}) were recorded on a pye-Unicam spectrophotometer using KBr Wafer technique. \textsuperscript{1}H-NMR spectra were obtained on a Varian EM-390 (90 MHz) spectrometer using TMS as internal standared and DMSO-d\textsubscript{6} as solvent Chemical shifts were expressed in δ (ppm) values. Elemental analyses were determined using Perkin-Elmer 240 C Microanalyser.

\textbf{General synthesis of ester (3)}

Dry acid 1a (0.01 mol) and SOCl\textsubscript{2} (30 ml) were refluxed for 2h. The excess of SOCl\textsubscript{2} was completely removed under pressure, to the residual yellow solid (2) suitable alcohol (15 ml) were added and the reaction mixture was again refluxed for 3h. Then the excess of alcohol was distilled off, the dry residue was treated under cooling with NaHCO\textsubscript{3} and the formed precipitate was filtered off and crystallized from ethanol.

\textbf{3a, (R = CH\textsubscript{3})}: yellow crystals, m.p. 185-187°C; yield, 80\% (Found: C, 72.74; H, 4.3; N, 8.50. C\textsubscript{20}H\textsubscript{14}N\textsubscript{2}O\textsubscript{3} required C, 72.71; H, 4.27; N, 8.47\%).

\textbf{3b, (R = CH\textsubscript{3}CH\textsubscript{2}−)}: brown crystals, m.p. 90-95°C; yield 60\% (Found: C, 76.85; H, 4.49; N, 6.91 C\textsubscript{26}H\textsubscript{18}N\textsubscript{2}O\textsubscript{3} required C, 76.83; H, 4.46; N, 6.89\%).

4-Amino-7-biphenylpyrido [4,3-d] pyridazin-1,5-dion (4)

A mixture of compound 3a (0.01 mol) and hydrazine hydrate (0.01 mol) in ethanol (30 ml) was refluxed for 6 h, then allowed to cool. The solid product was collected and crystallized from acetone as yellow crystals; m.p. 146-148°C; yield 72% (Found: C, 69.10; H, 4.30; N, 16.97. C_{19}H_{14}N_{4}O_{2} requires C, 69.08; H, 4.27; N, 16.95%).

1-(Acetylthiosemicarbazone)-4-carboxy-3-cyanopyrid-2-one(5)

A mixture of 1b (0.01 mol) and thiosemicarbazide (0.01 mol) in acetic acid (30 ml) was refluxed for 2 h, then allowed to cool. the solid product was filtered off and crystallized from ethanol as brown needles, m.p. 145-148°C; yield 70% (Found: C, 61.26; H, 3.99; N, 16.24; S, 7.45. C_{22}H_{17}N_{5}O_{S} requires C, 61.24; H, 3.97; N, 16.22; S, 7.43%).

1-[1-(4-oxothiazolidine-2-yl)hydrazonoethyl]-4-carboxy-3-cyano-6-biphenylpyrid-2-one (6)

A mixture of 5 (0.01 mol), ethylchloroacetate (0.01) and sodium acetate (0.02 ol)in ethanol was refluxed for 2 h, then allowed to cool. The solid product was filtered off and washed well with water and crystallized from ethanol as brown crystals, m.p. 220-223°C; yield 70% (Found: C, 61.16; H, 3.66; N, 14.88; S, 4.93. C_{24}H_{17}N_{5}O_{S} requires C, 61.14; H, 3.63; N, 14.85; S, 4.89%).

1-Acetylloxime-4-carboxy-3-cyano-6-biphenylpyrid-2-one (7)

A mixture of 1b (0.01 mol), hydroxylamine hydrochloride (0.01 mol in 2 ml H_{2}O) and sodium acetate (0.12 mol) in ethanol (30 ml) was refluxed for 2 h, then the mixture was allowed to cool and poured into cold water. The solid product was crystallized from acetic acid as brown crystals, m.p. 110-112°C; yield 70% (Found: C, 67.58; H, 4.08; N, 11.27. C_{21}H_{15}N_{3}O_{4} requires C, 67.55; H, 4.04 ; N, 11.25%).

4-carboxy-3-cyano-6-biphenyl-2-ethylthioglycolyl-pyridine (8)

To a stirred solution of 1c (0.01 mol) in DMF (10 ml), K_{2}CO_{3} (0.04 mol) was added and stirring was continued at 60°C for 30 min. Ethyl chloroacetate (0.02 mol) was dropwisely added and stirring was
continued for 1 h. After cooling, the reaction mixture was poured into an ice-cold water. The product was crystallized from acetone as brown crystals, m.p. 120-123°C; yield 45% (Found: C, 66.04; H, 4.35; N, 6.72; S, 7.68; C_{23}H_{18}N_2O_4S requires C, 66.01; H, 4.33; N, 6.69; S, 7.66%).

3-Amino-2-carboethoxy-6-biphenylthieno[2,3-b] pyridine (9)

To a stirred suspension of 8 (0.01 mol) in ethanol (10 ml), sodium methoxide (1 ml sodium methoxide, 2%) was added and the reaction mixture was heated on water bath under stirring for 15 min. The solid colour changed from orange to greenish yellow After cooling, the solid was separated by filtration and crystallized from dioxane, m.p. 230-233°C; yield 50% (Found: C, 66.04; H, 4.35; N, 6.72; S, 7.68 C_{23}H_{18}N_2O_4S requires C, 66.01; H, 4.33; N, 6.69; S, 7.66%).

4-Amino-S-carboxy-7-biphenylpyrido [2,3-d] pyrimidin-2-thione (10)

A mixture of 1c (0.01 mol) and thiourea (0.01 mol) was refluxed in ethanol (50 ml) containing few drops of piperidine (2 ml) for 5 h. The reaction mixture was allowed to cool and the solid product was filtered off and crystallized from ethanol as yellow crystals, m.p. 135-139°C; yield 65% (Found: C, 64.18; H, 3.78; N, 14.99; S, 8.59. C_{20}H_{14}N_2O_2S requires C, 64.16; H, 3.76; N, 14.96; S, 8.56%).

2-[4-carboxy-3-cyano-6-biphenyl-2-oxo-pyrid-1-yl]-3-phenyl-4-quinazolone (11)

To a solution of anthranilic acid (0.01 mol) in n-butanol (50 ml), 1d (0.01 mol) was added and the resulting solution was heated under reflux for 48 solvent was then evaporated under reduced pressure, and the solid product was collected by filtration and crystallized from acetone, m.p 230-233°C; yield 80% (Found: C, 73.89, H, 3.77, N, 10.48. C_{33}H_{20}N_2O_4 requires C, 73.87; H, 3.75; N, 10.44%)

2-[4-Carboxy-3-cyano-6-biphenyl-2-oxo-pyridin-1-yl]-3-phenyl-4 hydrazinoquinazoline (12)

A mixture of 11 (0.01 mol) and hydrazine hydrate (0.01 mol) in abs. ethanol (30 ml) was refluxed for 6 h. After cooling the precipitated product
was filtered off and crystallized by dioxane, m.p. 200-202°C; yield: 60%  
(Found : C, 72.01; H, 4.04; N, 15.29 C_{33}H_{22}N_{6}O_{3} requires, 71.99; H,  
4.02; N, 15.26%)

2-[4-Carboxe-3-cyano-6-biphenyl-2-oxo-pyrid-1-yl]-3-phenyl-4-  
(N'-phenylthiocarbamoyl hydrazino)-quinazoline (13)

A mixture of 12 (0.01 mol) and phenylisothiocyanate (0.01 mol) in  
abs. ethanol (50 ml) was refluxed for 6 h and then allowed to cool. The  
solid product was collected and crystallized from ethanol, m.p: 180-182°C;  
yield: 80% (Found: C, 70.09; H, 3.99; N, 14.31; S, 4.09. C_{40}H_{27}N_{6}O_{3}S  
requires C, 70.06; H, 3.96; N, 14.29; S, 4.67%)

Séries B: Chemistry and Chemical Engineering

INSTRUCTIONS FOR AUTHORS

Communications accepts original articles in various fields of chemistry and chemical
engineering. The Editor may invite reviews covering recent developments.

Manuscript preparation: The manuscript, written in English, should be typed in
double spacing throughout on a A4 paper with 4 cm left and 2 cm right margin. All pages
should be numbered.

Manuscripts, inclusive of figures and tables should not exceed 25 type-written pages.
Manuscripts should contain one original and three copies.

Please provide your telephone and fax numbers along with your E-mail address with
all submissions to the Editor-in-Chief.

Manuscript organisation: The manuscript should be divided as: The title page,
abstract and the main text. The text may be subdivided further according to the areas to be
discussed. The first page should contain the title, the author's names (initials and surname
only), with as asterisk after the name of the principal author.

Abstract: The abstract should not exceed 250 words and it should condense the
essential features of the article, with the focus on the major advances in the field.

Text: The main text should begin on a separate page and it is subdivided into
separate sections: Introduction, Results and Discussion, Experimental, Acknowledgements (if
any) and References. Symbols, formulae and equations that cannot be typewritten should be
written neatly. The reference numbers in the text should be written consecutively by
superscripts.

Tables: The tables should be titled, and should be given separately with indications on
the left hand margin to the text where the authors would like the tables to be inserted in
the proofs. The tables should not contain vertical lines.

Figures: Figures should be referred to as "Fig. (1)", "Fig. (2)", etc. in the text with
the Figure numbers given in bold within round brackets. Each figure should be accompanied
by a caption which should describe briefly the important features displayed in the figure.
Figures must be drawn neatly.
References: For the format of references, see the ACS Style Guide, pp 106-114.

Examples:

Abstracts, unpublished data and personal communications should not be given in the references section but they may be mentioned in the text and details provided as footnotes.

Charges: Each paper is due to be charged for the amount of which is determined by the administration each year.

Proofs: Page proofs are sent to authors. To avoid delays in publication, proofs should be checked immediately for typo-graphical errors and returned within 48 hours.

Reprints: 25 free reprints will be provided for each paper. Irrespective of their acceptance, manuscripts will not be returned to the authors.

Computer Disk: If you are able to initially prepare your manuscript in a MS Word Programme (Macintosh or PC) file including the figures translated into the picture environment of Encapsulated PostScript format (EPS), we advise that you do so. Then, only if and after your manuscript is accepted for publication, we will ask you to submit a revised disk copy of your manuscript which will enable us to more efficiently and accurately prepare proofs. (This is not a requirement but is highly encouraged.)
